MycoEpur-LAC WATER BODIES/ PONDS

Expert in biotechnology
and microbial ecology

www.laboratoires-biovitis.fr

Why fungal bioaugmentation?

MycoEpur-LAC amplifies the performance of the treatment tool thanks to a selection of the most effective microorganisms.

Its powerful arsenal of enzymes allows access to features that are usually difficult to reach with existing microbial communities.

→ MycoEpur-LAC

- is a standardised aerobic fungal consortium,
- is a natural bio-additive,
- is composed of bacterial genera known for their powerful enzymatic activities that degrade macromolecules in compounds that can be assimilated by heterotrophic microorganisms.

→ Features of MycoEpur-LAC

- reduces algae/clarifies water,
- decomposes organic silt,
- reduces odours,
- reduces organic suspended solids.

Specifications

Formulation
Powder

Dose
10 to 15 g / m²

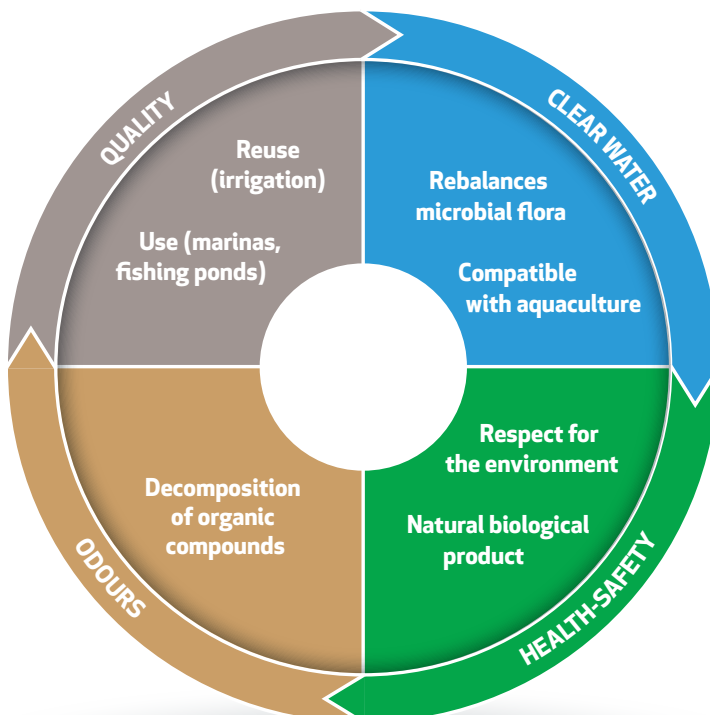

Packaging
Buckets: 1 to 8 kg

Use
Dilute and spray on entire surface to be treated

Storage
4 to 25°C
BEST BEFORE: 1 year
